

Know Where Your Water Goes

Water that drains from a toilet or sink in your home or business flows through the City's sewer system to a wastewater treatment plant for cleansing.

Water that flows outside from your roof, sump pump, driveway or street flows into the City's storm drainage system.

From there, the water will flow to the nearest creek, stream or lake without treatment.

#DYK: When draining a pool, discharges cannot be closer than five feet to any adjoining property line, public sidewalk or walkway. This also includes sump pumps, downspouts and foundation drains. *(City Code Section 16-413.B.2)*
